It's often helpful to know which version of Android a specific phone or tablet is running so you can get help with something or determine if a feature is present. The Android version itself is not the only little information you may want to find. The device name, manufacturer, and operator also affect the device software. Even the Linux kernel version and the new Android security patch level are important. How to find your Android version number and security patch level This information is available on the Android system-only settings screen. Whatever version of Android you're using and any customizations your Android device version has, you should be able to reach it in the same way. Open the app drawer, the full list of apps installed on your phone. It is almost always a button at the bottom of the home screen, in the center. Scroll through the list of installed apps and find an app called Settings. Tap the Settings icon to access the Android System-Based Settings app. Scroll down on the Settings screen and find an About Phone, About Tablet, or System option. You will usually find this at the bottom of the main Settings screen, under System, but depending on your phone it might be different. If you find a system-specific option, you can usually find the About Phone below that. Didn't you find him? Depending on your phone, here are some places you can find the Android version: Samsung Galaxy Phones: About Phone > Android Stock Software Information: System -> About Phone or About Tablet On the resulting screen, look for Android Version to find the Android version installed on your device as well: Just show the version number , not the code name, for example , says Android 6.0 instead of Android 6.0 Marshmallow. You'll need to do a web search or search for a Android code names if you want to know the code name associated with the version. Here's a current list: Android 11 Android 10 Android 9 Android 8.0 – 8.1: Oreo Android 7.0: Nougat Android 6.0: Marshmallow Android 5.0 – 5.1.1: Lollipop Android 4.4 – 4.4.4: Kit Kat Android 4.4 4.1 – 4.3.1: Jelly Bean Android 4.0 – 4.0.4: Ice Cream Sandwich Android 3.0 – 3.2.6: Honeycomb Android 2.3 – 2.3.7: Gingerbread Android 2.2 2.2.2.2.3: Froyo Android 2.0 – 2.1: Eclair Android 1.6: Donut Android 1.5: Cupcake Other fields here are also relevant. The Model number field tells you the name of your device, for example. RELATED: Google's best hidden games and Easter Eggs Build Number and Kernel Version give you information about the exact Android build on your device and its Linux kernel version and build date. Traditionally, this information has been helpful in determining whether your device has the latest security patches. In Android 6.0, Google added an Android Patch Security Level field here that tells you when your device last received security patches. (As an advantage, you can repeatedly tap the Android Version field here to access a different Easter egg on various versions of Android. On Android 5.0 Lollipop and 6.0 Marshmallow, for example, it's a hidden Flappy Bird-style game.) The exact version of Android you're using isn't the only important information. If you want help for a specific device, its manufacturer is also important, for example, the Samsung version of Android includes the TouchWiz interface, many Samsung apps and extensive interface modifications made by Samsung. Microsoft doesn't allow PC manufacturers to change the way the Windows Start menu, taskbar, and Control Panel work, but Google allows Android device manufacturers to run wild and change almost anything they want. Different devices from the same manufacturer will also have different customizations, so knowing the exact device you are using, as well as its manufacturer, is crucial when trying to get information or even custom ROMs for a specific device online. Android has gone through big changes over the years, with lots of added features and improvements made. It is unfortunate that due to manufacturer and carrier delays, many Android users are stuck on earlier versions of Android.However, many Android devices are being released with at least one of the three versions (Android 4.1, 4.2 and 4.3 refer to the latest versions of Jelly Bean) of the Jelly Bean version and many others are being updated to some of the latest versions of Android and so we have made a list of all the latest features of the Jelly Bean version to keep you up to date with all the awesome improvements that have been made. Project ButterIntroduced on Android 4.1 Jelly Bean – compatible with all Android 4.1+ running devices, Project Butter was first introduced on Android 4.1 Jelly Bean and ensures that devices run much smoother and lag-free. Google used processes such as vsync synchronization and storage in triple to ensure that animations were smooth and that the entire operating system was running at about 60FPS. This feature is compatible with all Android 4.1 devices and running and if you are upgrading your device to this software version, you will immediately notice a difference. Project Butter also allows the processor to grow when needed and quickly return to battery life when it is not NowIntroduced on Android 4.1 Jelly Bean – available on all Android 4.1+ running devices. Google Now is an integral part of the latest versions of Android and is a smart personal assistant that is proactive. What this means is that unlike other voice-activated assistants like Siri, Google Now can provide information before ordering it. For example, it will tell you the time in your location and back home and serve you information such as your flight plans and instructions for your next appointment without the user having to ask. Along with proactive features, Google Now can also answer questions, open apps, write notes, and more. Google Now is one of the biggest features of Jelly Bean versions and is compatible with all devices running Android 4.1 and later. Multi-user support First seen on Android 4.2 Jelly Bean (enhanced on Android 4.3 Jelly Bean) – only available on tablets. By bringing Android tablets online with desktop operating systems, Android 4.2 added the ability to add individual users to Android tablets. This allowed people to share their tablet while customizing their home screen, wallpaper and more. Unfortunately, Android 4.2 did not allow the administrator to restrict what other user could access. This feature was brought in at the release of Android 4.3 Jelly Bean and is ideal for parents who want to make sure their kids use the family tablet purely for educational purposes. Android BeamIntroduced on Android 4.0 ICS (enhanced on Android 4.1 Jelly Bean) - available on Android 4.0+ running devices with NFC capabilities. Originally introduced on Android 4.0 Ice Cream Sandwich, additional functionality was added to Android Beam in Android version 4.1 Jelly Bean. Android Beam connects via NFC (Near Field Communications) and transfers data such as videos, images and contact information via Bluetooth.Android Beam is available on NFC-enabled devices running Android 4.0 and above. However, the ability to transfer larger files like images and videos is only available on devices running Android 4.1 and above. DaydreamIntroduced on Android 4.2 Jelly Bean – available on all Android 4.2+ running devices. Daydream is a feature that allows you to view pieces of information such as time, or an image gallery in a way of screensavers. This feature can be enabled when docked, loaded even when idle, and is compatible with all devices running Android 4.2 and later. PhotosphereIntroduced on Android 4.2 Jelly Bean (enhanced on Android 4.3 Jelly Bean) – available on all Android 4.2+ running devices. Photosphere is a camera feature that allows users to take 360 panoramic-style photos that allow take immersive photographs that can show your exact point of view. Photospheres are similar to Street View photos and the feature is available on Nexus and Google Play Edition devices running Android 4.2 and later. Bluetooth Low EnergyBajo seen on Android 4.3 Jelly BeanBluetooth Low Energy Energy it was introduced on Android 4.3 Jelly Bean, preparing Android for the explosion of wearable technology in the last year. Bluetooth Low Energy consumes less than half the amount of power used by standard Bluetooth technology and the feature is compatible with devices using Android 4.3 and above with SoCs that support Bluetooth LE. MiracastFirst seen on Android 4.2 Jelly BeanMiracast is a standard that uses WiFi Direct to share screens between devices. Support for Miracast was added on Android 4.2 Jelly Bean allowing users to project what is on their tablet or smartphone to a TV that supports Miracast.Wrap upAndroid will continue to develop as a mobile operating system with the next major version, Android 4.4 Kit Kat, expected to start in the last quarter of the year.
